

Aastra MX-ONE™

» Evolution of your communication

Joining the evolution

The world of business is constantly evolving. Voice is no longer the dominant communication method, data traffic becomes more important every day. A major market trend sees companies gradually upgrading to totally IP-based systems. Having a communication system capable of handling the demands of modern business, without increasing your overheads, is vital.

Aastra designs systems to support the business processes which exist within enterprises. MX-ONE™ is a fully-fledged, server-based communications solution for medium and large enterprises. It is a cost-effective way of achieving your communication goals.

Benefits

MX-ONE™ offers you converged network voice and data services onto a single LAN. This provides a more effective and cost efficient communication tool.

Aastra MX-ONE™ solution enables your enterprise to benefit from a range of powerful applications. Utilizing voice, data and video offers a fully multimedia solution.

Improved service levels will have positive productivity benefits across your business.

MX-ONE™ has been designed to be the natural upgrade from the MD110 solution, enabling you to gain the full benefit of previous investment.

Your RoHS obligations

A key factor when considering updating your operations is the new legislation on Restriction of the use of certain Hazardous Substances (RoHS) which came into force on July 1 2006. RoHS is a Directive banning the placing on the EU market of new electrical and electronic equipment containing more than agreed levels of certain chemicals and compounds such as lead and mercury.

MX-ONE™ is based entirely on RoHS compliant hardware.

Aastra has already ensured the next step your company takes in communications will make you RoHS compliant.

Why evolve?

Four good reasons to move to MX-ONE™

1) Cost-efficient migration – Existing MD110 customers will be offered a cost-efficient migration path to MX-ONE™.

2) Structured migration at your pace – Whether you choose to reach all-IP in one step or many, Aastra supports your objectives.

3) It's future-proof – MX-ONE™ is based on modern open software and hardware technology, allowing any new developments to be absorbed seamlessly into the system.

4) Streamlined operations and maintenance – IT-based, tools are offered as an option to Dynamic Network Administration.

Taking you forward

Having migrated to MX-ONE™ you will be positioned to benefit from future developments in the product range.

The easy-to-use solution has a task-orientated approach.

Aastra is continuing to evolve MX-ONE™ into an all-in-one multimedia solution, creating a path to integration with SIP-based business applications, in order to comprehensively support all enterprise sectors.

MX-ONE™ offers visible cost savings to your enterprise and because Aastra design all upgrades to be compatible with existing solutions, your investment is future-proof.

Aastra Technologies Limited, is a global company at the forefront of the Enterprise Communication market.
